**Chairmans' Roundtable:  
How Do You Keep the Politics Out of Mobility?**

*Sponsored by Kleinfelder/Simon Wong Engineering*

The Chairs of Southern California's regional transportation agencies have a unique role in achieving the goal of mobility as leaders of their respective transportation agencies. As an elected official, the competing political demands from constituents and the various constraints on funding add to the complexity of their challenges. For the first time ever, come see the Chairs of our regional transportation agencies discuss how they prioritize among these competing issues while achieving mobility and balance.

### Millennials to Boomers: Understanding Generational Mobility Trends

*Sponsored by Professional Engineers in  
California Government*

How much of our attitudes about travel are determined by when we were born? Key social, technological and economic trends during our “wonder years” can impact lifestyles and future travel. The historic population growth that occurred in 1945–1965 (baby boomers) and again in 1981–1995 (millennials) is now raising questions about how people will travel in the years to come. Our lively panel of experts will discuss their work sorting out the demographic trends, assumptions and likely realities that will impact the paths forward. How do employment, family and life-cycle trends affect travel patterns for millennials? How will baby boomers get where they need to go as they age? Does technology affect the transportation patterns for millennials and boomers the same? Come listen, learn and comment on how to move this region forward without leaving anyone behind.

### The Different Voices of Road User Charge & the Path Forward

*Sponsored by Southern California  
Association of Governments*

Revenue sources generated from fuel taxes are quickly evaporating, contributing to the nation’s infrastructure crisis. A Road User Charge would raise funds based on how many miles a motorist drives. Is this approach equitable? Does the public believe there is a funding shortfall, or do they believe funding levels are adequate, but mismanaged? SB 1077 created a Road User Charge Technical Advisory Committee charged with developing a pilot program to assess the potential for a mileage-based revenue collection as an alternative to a gas tax. Is a Road User Charge the solution to California’s transportation infrastructure problems? Join us and hear what the experts have to say.

#### MODERATOR

Jim Madaffer

*Chair, California Road Charge Technical Advisory Committee and Commissioner, California Transportation Commission*

### The Future of Alternative Delivery in California

*Sponsored by Stantec Consulting Services, Inc.*

California has been utilizing alternative delivery mechanisms for decades. Some forms of alternative delivery like design-build are being employed very successfully and are supported by legislative authority. Others, like transportation concessions, have been employed with varying degrees of success and currently face an uncertain future. Although evidence from other states and countries makes clear that alternative delivery *can work* when properly employed, how will we choose to use it here? Come hear firsthand what our leading transportation agencies, private sector and stakeholders are currently planning and how their approach will shape the landscape of alternative delivery in California.

**Rail in California:  
Improving Quality of Life for Generations to Come**

*Sponsored by LSA Associates, Inc.*

How will our current and future rail systems in Southern California contribute to enhancing our quality of life? What are the technical, operational and institutional improvements that will ensure that mobility, safety, convenience, comfort and prosperity are achieved in future decades? The panelists will present perspectives covering station site development, local transit, regional commuter rail, intercity rail and statewide high-speed rail. For California to remain competitive, our various rail systems must work together to achieve a world class transportation system.

## Afternoon Concurrent Breakout Session 4 *Magic Kingdom Ballroom 4*

**The New Last Mile**

*Sponsored by Cerrell Associates and Uber*

While our freeways are becoming ever more congested, technology and the new shared economy are changing the way folks get around. The creation of mobility hubs, ride-hailing services and car and bike sharing are making active transportation and transit an easier choice for many. Smartphone apps can summon a ride, find your next transit option, rent a car anytime/anywhere and find available parking places closest to your destination. All we need is a universal payment method to make it all seamless. How can these services encourage more transit ridership? How can they fill in transit gaps? What does the future hold? This panel will explore latest mobility concepts and technologies, and the benefits they will bring to our mobility networks.
